

PRESS RELEASE 31st March 2009

Distributed IN over IP to reduce operator costs

Evolved Intelligence, the next generation IN company, has launched a new concept in Intelligent Network architecture that reduces operator costs for the delivery of next generation, carrier grade IN services. Evolved Intelligence's ENGINE platform achieves this through an innovative distributed architecture. This means that applications can be distributed throughout a group of operators sharing costs and management overhead. A low cost SS7 component is fitted to the network allowing remote access to an ENGINE server via IP.

Says Evolved Intelligence's CTO, Nick Jones: "A single ENGINE platform can run multiple applications of a variety of types and allow these to be shared by several operators. This substantially reduces operators' costs for providing applications such as roaming steering, messaging fraud management, VPN and advanced pre-pay."

ENGINE services can also be provided as a remote managed service. This gives low cost access to a library of application services.

Says Evolved Intelligence's Marketing Director, Robin Burton: "This means that the entry cost for launching a new service can be very low indeed. Operators can test out the value of new services without having to make a big up front investment. It also means that smaller operators can afford to launch applications which previously would have been too expensive."

Evolved Intelligence has developed services include roaming applications, messaging applications and advanced pre-pay applications. The company is also able to offer various third party applications hosted on the ENGINE platform

including vPBX and VPN. New application development is also available for bespoke applications.

About Evolved Intelligence

Evolved Intelligence is based in Bristol, UK and was formed in 2007. The Evolved Intelligence team has a long experience in delivering IN services. Key members of the team worked for the Bristol based company, Aethos, widely regarded as one of the principal pioneers of pre-pay mobile communications. The Evolved Intelligence team is also a pioneer in the use of the JAIN platform and of Agile Development methodology.
